

Managed Security Services

A Better Way To Keep Your Network Safe and Reliable

Your business is under attack by spammers and hackers looking to take over your computers, steal your data, disrupt your business, and drain your bank accounts. But now there is a way to know your business is always protected. Managed Security from TeamLogic IT ensures that your network is monitored 24x7 and always up-to-date against the ever changing threat landscape.

- **Stops spam, spyware, and viruses** before they enter your network
- **Provides control of network activities** that reduce productivity or put your network at risk, such as inappropriate web surfing
- **Enables secure access** for remote employees
- **Prevents costly downtime** and poor performance

Customized for your Business

TeamLogic IT knows each business is different. During deployment, TeamLogic IT will work with you to define and implement the network policies that make sense for your business. Once in place, TeamLogic IT will continue to manage your security system and advise of any suggested modifications.

Combine with SystemWatch & Backup

In addition to securing your network, Managed Security integrates with SystemWatch—TeamLogic IT's proactive remote management and monitoring service. With SystemWatch, TeamLogic IT can ensure each PC and server on your network is running to peak performance, fully patched, and all critical data is backed up. With TeamLogic IT, you can focus on your business—not your technology.
