

Data Backup and Recovery

Data backup and recovery are essential parts of any business operation. Ensuring the ability to quickly recover and access your data and systems from a crash, disaster or health crisis is the goal of our data backup and recovery services.

Like most businesses, your data is the backbone of your business. It's an asset that defines your company. Keeping it safe, intact, restorable and accessible will give you peace of mind in the face of a catastrophe. As with any important business function, planning and preparation are key and they're essential elements of the quality data backup and recovery services we can provide your organization.

DATA BACKUP: 3 OPTIONS

At TeamLogic IT, our technicians can help you select the right data backup solution that fits your needs and budget. Through local image backup we can back up your operating system, applications, and databases on a regular basis onsite, making data recovery faster and easier.

Offsite data backup capabilities are available, ranging from nightly file backup to cloud server virtualization. These offsite data backups provide added security and accessibility in the event of a system crash, facility disaster or other crisis to get you up and running quickly.

Hybrid backup services provide local backups on a prescribed frequency along with offsite backups. The flexibility of an offsite backup allows restoration to be done even when a crisis doesn't allow local access or for restoring remote workforce employees.

RELIABLE DATA RECOVERY

At TeamLogic IT we provide access to some of the most experienced data access and recovery specialists in the industry. One of our data recovery partners has one of the fastest standard turnaround times and highest system data recovery success rates in the industry. We recover Redundant Array of Independent Disk (RAID) data from all RAID levels from any loss scenario, including multiple drive failures, severe corruption, natural disasters or other crises.

LOCAL, OFFSITE OR HYBRID?

The right solution depends on your business structure and goals, but with all of our backup and recovery services you get:

- *Automatic and regular backups so you can focus on other daily priorities*
- *Protection for your servers, onsite workstations and mobile devices*
- *Cost-effective and stress-free administration of your backups*
- *Peace of mind during a crisis*

Contact us for help weighing the pros and cons of all backup and recovery options to determine the best protection for your business.

Your data is critical to your business. Let TeamLogic IT handle your data backup, recovery and accessibility needs.
