

Bring AI Out of the Shadows

AI can enhance productivity, but unmanaged AI use can introduce risk.

Artificial intelligence is rapidly becoming part of the everyday workplace. Employees are using generative AI assistants and other AI-enabled applications to work faster, create content, analyze information and solve problems.

But what happens when employees use AI tools, accounts or features without your organization's knowledge, approval or safeguards?

That's **Shadow AI** - the use of AI without organizational approval or outside established IT, security and governance policies. It may already be happening in your business. Employees often turn to AI to solve real workload problems. The goal is not to stop that initiative, but to provide a responsible, governed path. Without the right guardrails, well-intentioned AI use can create business risk.

SENSITIVE DATA EXPOSURE

Employees may unknowingly enter confidential business, customer, financial or personally identifiable information into consumer, personal or otherwise unapproved AI tools and accounts where business safeguards may not apply.

SECURITY & PRIVACY RISKS

AI tools, account types and configurations do not all provide the same protections for how business information is accessed, stored and processed.

COMPLIANCE CONCERNS

Unmanaged AI use may create gaps in meeting regulatory, contractual or industry obligations.

INACCURATE OR UNRELIABLE INFORMATION

AI-generated content can be incomplete, inaccurate or misleading, creating risk when employees rely on it without verification and appropriate human review.

LOSS OF VISIBILITY & CONTROL

You can't effectively manage AI risk if you don't understand which tools are being used, by whom and for what purposes.

Don't Stop AI. Manage It.
Move from Shadow AI to
Responsible, Governed Use.

CALL TEAMLOGIC IT TODAY TO:

- **Explore Shadow AI visibility** and reporting options suited to your environment
- **Gain insight** into observed AI activity and the business needs employees are addressing
- **Identify recurring work** and practical AI opportunities grounded in how your business operates
- **Prioritize opportunities** based on expected business value, implementation effort, risk, and human oversight
- **Establish clear policies**, approved uses, and governance controls for responsible AI use
- **Estimate potential time savings**, recovered capacity, and payback using transparent assumptions
- **Build a sequenced action plan** showing what to pursue first, what needs preparation, and what to defer

People First. AI Forward. Outcome Driven.
