Strategic IT Partnership Empowers a College to Adapt, Grow and Innovate

TeamLogic IT delivers stability, compliance and flexibility—helping a faith-based institution thrive through change.

When a local Christian college sought a strategic IT partner to restructure, manage and future-proof its technology environment, it turned to TeamLogic IT. The institution needed more than technical support; it required a collaborative partner that understood its mission, regulatory obligations and long-term vision.

TeamLogic IT in Burlington, North Carolina, first engaged with the college in 2020, providing comprehensive IT services spanning network and workstation management, cybersecurity and chief information officer support. These services were critical in supporting technical audits and budget planning required by the Department of Education, ensuring compliance while enabling smarter technology investments.

When the COVID pandemic reshaped how education was delivered, the college faced an urgent need to pivot. TeamLogic IT responded quickly, enabling staff and students to securely access workstations and systems from home. With minimal disruption, classes continued, operations remained stable, and the institution maintained continuity during a period of unprecedented uncertainty.

More recently, the college undertook the development of a new sports and fitness center, an initiative that required a fully integrated IT network built from the ground up. TeamLogic IT partnered closely with the contractor and vendors to design

and deploy modern IT infrastructure tailored to the facility's needs. Thanks to TeamLogic IT's care for and familiarity with the college's staff, operations and internal policies, the project was completed seamlessly and successfully.

TeamLogic IT's flexibility, white-glove service, and proactive guidance throughout these key projects and beyond earned the confidence of decision-makers across the organization. With evolving demands and an increasingly complex technology landscape, the college recognized the need for ongoing strategic leadership and chose TeamLogic IT as its in-house IT managed services provider.

"Paul's commitment to our staff, students and entire institution—and his efficiency in helping us uphold Department of Education compliance standards and requirements—has been paramount," says Dr. LaTanya Tyson, PhD., president of Carolina Christian College. "His leadership and top-notch services have enabled us to expand our educational offerings and collaborate with other schools on remote programs, opening the door to new revenue streams and long-term growth."

Today, TeamLogic IT Burlington continues to provide peace of mind through reliable technology, strategic insight and responsive customer-centric support. The partnership reflects a shared commitment to excellence—empowering the college to focus on its mission while confidently advancing into the future.
