

Microsoft 365 Business Premium

Security first. Cloud-enabled. AI empowered.

Microsoft 365 Business Standard provides core tools for email, collaboration and file sharing. Business Premium builds on that foundation by adding stronger security, centralized management and cloud-based controls that help reduce current risks while also preparing your organization for future capabilities such as automation and AI.

SECURITY FIRST — REDUCE RISK WITHOUT ADDED COMPLEXITY

- **Defend against phishing-led fraud and ransomware.** Advanced email and malware protection helps block malicious links and attachments before they reach your people and reduces the impact when threats get through.
- **Reduce the risk of unauthorized access and scams.** Policy-based access rules check user and device compliance before granting entry, lowering the risk of account takeover and fraudulent payments that basic MFA alone can't manage.
- **Protect every laptop and phone.** Includes enterprise-grade protection for Windows, macOS, iOS and Android.
- **Protect sensitive information.** Automatic classification and encryption for emails and files help safeguard business IP, client data and financial information while supporting compliance.
- **Simplify your security stack.** Unifies key protections (email, device, identity and data) within the Microsoft 365 platform, reducing complexity.

CLOUD ENABLED — WORK FLEXIBLY WITH GUARDRAILS

- **Onboard and offboard faster.** Automated device and account setup with centralized policies is included, so new hires get the right apps on day one, and departing employees can be removed in minutes.
- **Enable remote work without losing control.** Communicate easily and securely to ensure collaborative, compliant and encrypted file sharing while leveraging the power of Microsoft Cloud.
- **Invite customers and partners confidently.** Built-in sharing rules and controls help ensure collaboration happens safely, reducing the risk of accidental data exposure, access issues, or disruptions that can lead to downtime.

- **Apply consistent rules everywhere.** Centralized policies and conditional access enforce the same collaboration and access standards across offices and roles, eliminating manual enforcement.
- **Streamline operations as you grow.** By unifying device, file and access controls on a single Microsoft platform, Premium reduces tool sprawl and complexity, giving you more efficiency, better user experience and greater control.
- **Keep work organized as teams scale.** Premium keeps projects, files and conversations structured even as your organization grows.

AI EMPOWERED — READY WHEN YOU ARE

- **Start using AI safely.** Copilot Chat is available at no extra cost with eligible Microsoft 365 subscriptions; Premium's identity, device and data controls keep these AI chats within your security and compliance boundaries.
- **Lay the foundation for next-generation AI.** The optional Microsoft 365 Copilot add-on can transform how your teams create and analyze information, allowing AI to draw on the right information without creating new risks.

HOW TEAMLOGIC IT HELPS

TeamLogic IT helps organizations move beyond basic productivity to a secure, cloud-ready environment. We assess your current setup, align technology to business goals, and deploy Business Premium with the right policies for users, devices, collaboration and data protection. Ongoing management and support help reduce complexity, improve visibility and provide a clear path forward as your needs evolve.

Move forward with **The Color of Confidence®**
