

Security threats are growing more aggressively every day and cyber criminals are getting smarter. The cost of disruption caused by breaches and the general loss of important data can cripple a business. That's why security concerns are now more top of mind for business owners than ever before.

DATA AND BUSINESS PROTECTION

Don't put your company at risk. Work with TeamLogic IT. We do more than protect your data—we focus on business protection. Technology can go a long way to protecting your data yet policies and procedures around access, securing data, and dealing with breaches must be a part of a comprehensive security plan.

Our approach to security is built around the National Institute of Standards and Technology (NIST) Security Framework, which guides security activities and helps assure that cybersecurity risks are part of a company's risk management processes. Our services encompass:

Identifying where your business may be at risk

Protecting your assets

Detecting incidents

Responding with a plan

Recovering from an incident.

ASSESSING YOUR NEEDS

As a managed IT services provider, our priority is to deliver the highly available, secure and flexible IT systems you need to compete in the marketplace, and cybersecurity is part of that promise. We start by assessing your environment from a security perspective and can perform the following types of assessments, based on your business:

- Network Assessment
- System Assessment
- HIPAA Assessment
- Security Assessment
- PCI/DSS Assessment

At TeamLogic IT we remove the day-to-day complexity of securing your product, financial, and customer information, so you can get back to what you're passionate about—your business.

Protect your business today. Call TeamLogic IT for the best in cybersecurity services.
